

Childhood Memories of kids of army men!

SCRIPT:

The movie basically shows us or rather motivates us to take pride in our soldiers..

It portrays the level of sacrifice our soldiers make in order to protect their country. It shows us how tough it is for the soldier and his family to support his choices of choosing his country over himself and his family.

The Tag-line basically is “Each time a soldier says bye to his family, inside he has a fear that it's probably the last time he's seeing them”

We have 3 scenes:

Scene 1: Shows us the affection between a soldier and his daughter. Shows them playing and portrays their love towards one another.

Scene 2: The soldier has to leave for duty. The daughter doesn't want him to leave. She tries to stop him but the soldier has to place his duty towards the country at a higher priority.

Scene 3: The soldier is in a battlefield. Even after fighting valiantly, he ends up dying for the country..

SALUTE TO OUR SOLDIERS.

STEPS IN MAKING THE MOVIE:

We used a software called blender to make the movie. We imported the 3D models(.fbx format) from a website called “Mixamo.com”.

We used the dope sheet and the time-line features of blender to govern motion of each model in each frame. Motion is based on translation, rotation, scaling, frame balancing (For the slow motion) and camera focal length changing (“zoom in, zoom out”). Blender auto fills the non assigned key frames.

We set a background image using two faces of a cube by increasing the angle between the faces to 150 degrees to give a 3D effect to a 2D image.

We added a sound track to give a better feel to the theme.

We exported the blend files.
